## WHAT IS LOADED FILTER PAPER?

Ace Filters' Loaded Filter Paper is filter paper loaded with performance enhancing Miracle Powder. Miracle Powder is a magnesium silicate food grade white powder that absorbs acids, water, carbon and other impurities from your cooking oil. Unlike standard filter papers, this powder is added into the first stages of manufacture then dried, forming part of the structure of the paper. The end result is an all in one filter paper.

### What is Loaded Paper used for?

Loaded Filter Paper is used in the fry oil filtration process and can be a simple substitute for standard papers. It can be used for both wheel up portable filter machines and built in filter systems. It can be made to any shape and size in either flat sheets or envelopes.

### Is Loaded Paper cost effective?

Loaded Filter Paper is an all in one paper which means you don't need to buy paper and powder separately. The cost of Loaded Filter Paper is cheaper than standard paper and powder.

### Why use Loaded Paper?

Loaded Filter Paper has Miracle Powder in it making it a class above the rest. It performs better than standard paper: it has a low micron rating of 4 and can absorb impurities that standard paper is unable to capture e.g. carbon, water, acids. There is no need to add any other powders when filtering as this paper does it all in one!

### How do I get Loaded Paper?

Please ask your nearest Catering Wholesalers or
